## INTERMEC HONEYWELL CK3 GUN HOLSTER WITH METAL BELT CLIP

UltimaCase recognized a need for a custom case solution that would satisfy the requirements of the exacting conditions often found in distribution centers and developed the Intermec by Honeywell CK3 Gun Holster with Metal Belt Clip. Its rugged construction matches the performance of the CK3 and can accommodate a cross section of staff members on the move.

## FEATURES

The Honeywell CK3 Gun Holster with Metal Belt Clip is designed for left or right handed use. Its components include black ballistic nylon, a fixed metal belt clip, and a snap retainer strap.

## BENEFITS

One of the major selling points of the CK3 is its rugged construction. UltimaCase chose ballistic nylon as the casing material for its long lasting nature and durability. The CK3 protects against rain and dust, and with that in mind, ballistic nylon is the perfect choice because it is easy to keep clean.

Other comparably priced holsters come equipped with plastic belt clips. However, because of the harsh attributes associated with distribution centers, the UltimaCase design team decided to manufacture this holster with an upgraded metal clip to meet the quality standards of the CK3.

A single CK3 mobile device may have multiple users in a distribution center setting. That is why it was imperative that the holster be designed for both left and right-handed users. The Honeywell CK3 Gun Holster with Metal Belt Clip can easily be switched to either side. The integrated belt clip makes user attachment easy.

While the CK3 is designed to withstand multiple drops to concrete, the UltimaCase design team thinks it is best if it didn't. To complete the holster, they added a snap retaining strap to the top. Retainer straps keep gun device in place and prevent accidental drops.

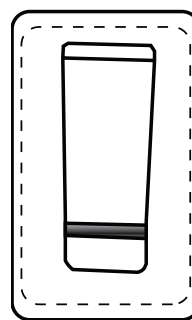

## THE COMPANY

Distribution center operations are complex. Slim margins and fierce competition leave no room for error – and the race to improve never ends. Honeywell offers a complete portfolio of integrated workflow solutions to deliver what your business needs: total DC optimization. You'll see it in a

connected workforce that's faster, more accurate and more flexible to changing demands – all of which boosts performance, while reducing costs.

Honeywell's CK3 mobile computer delivers highly adaptable data and image capture capabilities, along with secure wireless communications, all in a highly durable handheld package. The CK3 was specifically designed for warehouse operations and incorporates many capabilities never available before in one device.

A Honeywell client using the CK3 in their distribution center, has seen a rise of 30% productivity in the allocation of resources and accuracy at its facility since the introduction of the system. Pickers can now pick up to 24 orders at once, compared to six under the previous paper-based system, helping improve warehouse efficiency and leaving resources free to be allocated to other parts of the business.
